

Efficient and automatic removal of litter

Benefits

With AutoShov litter removal system you benefit from many advantages:

- ✓ Litter layer remains thin
- ✓ Litter sliders made of stainless steel
- ✓ Less stress in the house
- ✓ Less labor
- ✓ Easier control
- ✓ Better climate
- ✓ Less floor eggs

About the AutoShov system

The AutoShov litter removal system easily removes excess litter out of the poultry house and keeps the litter level low.

Effectively remove litter

The sliders of the AutoShov litter removal system move automatically through the house with the help of a steel cable and motor unit. Each circuit consists out of a maximum of 40 AutoShov litter sliders and multiple circuits can be operated by one control panel. Various protective guards ensure a good collision protection. To avoid

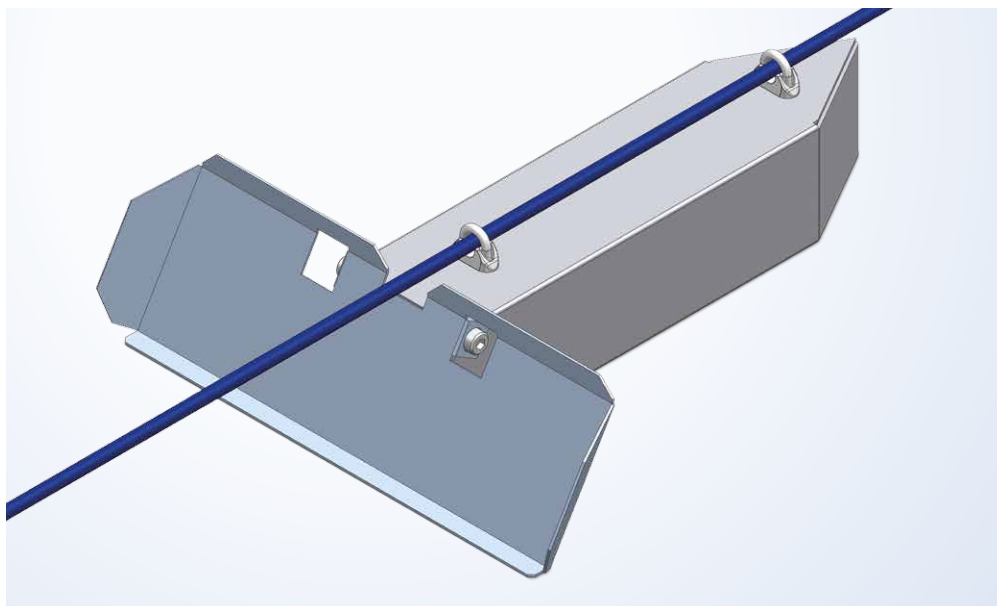

exposure to ammonia, the scrapers are made of stainless steel and the steel cable has a protection coating. A safety device ensures that the system only works with a running manure belt. The AutoShov litter removal system needs little maintenance because the essential elements are made of stainless steel.

AutoShov

Efficient and automatic
removal of litter

No stress

The effective AutoShov system avoids stress in the flock which is better for the welfare of the animals. Removing litter always causes disruption and takes up precious working time. Due to the continuous removal of litter, accumulation is prevented and the control of your house is much easier. The system also helps to improve the climate in the house.

Technical details

- Drive unit (0.37 kW)
- PP-coated steel cable 8 mm
- Up to 40 stainless steel litter sliders per circuit
- 2 Guide wheels for guiding the wire rope
- 2 Guide wheels with inductive sensor and limit switch
- 3 Protection guards for the driving and 2 guide wheels
- Control panel with signaling
- Emergency stop
- Connection 1 Ph 230V 50 Hz

Options

- Up to 2 circuits per control
- PVC seal for transit partitions
- Cover discharge opening
